WORK EXPERIENCE

INFOGAIN CORPORATION

Associate Software Engineer

Bangalore, India
July 2025 - Present

- Designed and operated distributed PySpark ETL pipelines on Azure Databricks in a large distributed computing environment, processing gigabytes of enterprise data at scale.
- Built scalable, fault-tolerant, and low-cost automated CDC reconciliation frameworks to validate data integrity across distributed storage systems, embedding test-driven and CI/CD-aligned engineering discipline.
- Collaborated with project managers and technical leads to translate business requirements into compliant, production-ready ingestion pipelines, practicing Agile delivery and iterative stakeholder feedback cycles.

SAMSUNG RESEARCH AND DEVELOPMENT

Research Intern

Bangalore, India (Remote)
Feb 2023 - Sep 2023

- Designed a multi-node distributed microservices system on Kubernetes, applying computer science fundamentals and algorithm design to cut API response time by 25% and optimize server load by 30%.
- Integrated an Open Log Forwarder into existing multi-tiered systems, handling ambiguous infrastructure problems and improving large-scale production observability.
- Created solutions to run predictions on distributed systems, building real-time Grafana dashboards for peak-hour troubleshooting of inference services at scale.

PROJECTS

Web to DB Automator | Python, Streamlit, LangGraph, Gemini, Tavily, Supabase/Postgres

- Built a LangGraph-powered Streamlit agent that researches web sources with Tavily, extracts evidence-backed structured rows with Gemini, previews table data, and prepares safe Supabase/Postgres upserts.
- Implemented a human-in-the-loop write gate with schema/SQL previews, SELECT-only query protection, audit logging, and unit-tested routing guards to prevent unintended database mutations.

Alloy AI - Code Assistant | TypeScript, Node.js, VS Code API

- Architected privacy-first AI coding software using Object-Oriented Design and a Merkle Tree Indexer for scalable, high-precision context retrieval across local repositories.
- Designed and coded a custom token compression algorithm to efficiently handle large error logs across multi-LLM backends such as Gemini and OpenAI before shipping to the VS Code Marketplace.

Context Aware File Organizer | Python, Llama.cpp, PySide6

- Built a fully offline GenAI pipeline that clusters documents with local vector embeddings and Agglomerative Clustering, then uses a local Llama inference engine to generate context-aware folder names.
- Chose Llama.cpp for quantization support and CPU/GPU portability, gaining hands-on understanding of the LLM inference stack behind production AI services.

SKILLS

Computer Science Fundamentals: Object-Oriented Design (OOD), Data Structures, Algorithm Design, Complexity Analysis, Problem Solving, Optimization Mathematics.

Languages: Python, C, C++, SQL.

Distributed Systems & Architecture: Distributed Computing Environments, Multi-Tiered Systems, Distributed Storage & Query Systems, Microservices, Kubernetes, Docker, Apache Spark (PySpark).

Development & Practices: Agile Environment, Relational Databases, CI/CD, Git, Linux, System Observability (Grafana, Elasticsearch).

AI / GenAI: LangGraph, LangChain, ChromaDB, RAG, Transformer Architectures, LLM Inference Optimization, Gemini, OpenAI.

EDUCATION

CHANDIGARH UNIVERSITY

Bachelor of Engineering

Chandigarh, India
Jun 2021 - Jun 2025
CGPA: 7.8/10

Major in Computer Science with Specialization in AIML

- Relevant Coursework: Artificial Intelligence; Machine Learning; Distributed Systems; Data Structure & Algorithms; Computer Networks.
